

The Chicago Author-Date referencing style has two basic systems of documentation. There is the **humanities** style (which can also be known as the **footnote and endnote** or the **notes and bibliography** style), as well as the **author-date** style. This guide follows the **author-date** system of referencing. This involves citations within the text corresponding to a full bibliographic entry in the reference list at the end of the document. The in-text citations include the author's last name, followed by the date of publication in parentheses. The bibliographic entry in the reference list includes all the other necessary publication information.

When using **EndNote**, it is recommended that the style system to use is **Chicago Curtin 2009**.

**Note:** this page is only an introduction to the Chicago Author-Date referencing system. Curtin University Library provides a modified version of the **author-date** system presented in:

*The Chicago manual of style*. 2003. 15th ed. Chicago: The University of Chicago Press.

*How to cite references: Chicago style*. 2008.

## What is Referencing?

Referencing is a standardised method of acknowledging sources of information and ideas that you have used in your assignment in a way that uniquely identifies their source. Direct quotations, facts and figures, as well as ideas and theories, from both published and unpublished works must be referenced.

There are many acceptable forms of referencing. This information sheet provides a brief guide to the Chicago Author-Date referencing style. Within the text of the assignment the author's name is given first, followed by the publication date. A reference list at the end of the assignment contains the full details of all the in-text citations.

## Why Reference?

Referencing is necessary to avoid plagiarism, to verify quotations, and to enable readers to follow-up and read more fully the cited author's arguments.

## Steps Involved in Referencing

1. Note down the full bibliographic details including the page number(s) from which the information is taken.

In the case of a **book**, 'bibliographical details' refers to: author/editor, year of publication, title, edition, volume number, place of publication and publisher as found on the front and back of the title page. (Not all of these details will necessarily be applicable).

In the case of a **journal article**, the details required include: author of the article, year of publication, title of the article, title of the journal, volume and issue number of the journal, and page numbers.

For all **electronic information**, in addition to the above you should note the date that you accessed the information, and database name or web address (URL).

2. Insert the citation at the appropriate place within the text of the document (see examples below).
3. Provide a reference list at the end of the document (see examples below).

## In-Text Citations

Use the name of the author, followed by the year of publication when citing references within the text of an assignment.

Where authors of different references have the same family name, include the author's initials in the in-text citation i.e.(Hamilton, C. L. 1994) or C. L. Hamilton (1994). If two or more authors are cited at the same point in the text then they are included in the same in-text citation, separated by a semicolon e.g. (Brown 1991; Smith 2003). They are presented alphabetically by author.

When directly quoting from another source, the relevant page number **must** be given and quotation marks placed around the quote. It is **not** necessary to include the page number when paraphrasing or referring to an idea from another source which is a book or lengthy text.

**What is a Reference List?** *You can view an example of a Reference List using the Chicago Author-date referencing style at [http://library.curtin.edu.au/research\\_and\\_information\\_skills/referencing/reference\\_list.pdf](http://library.curtin.edu.au/research_and_information_skills/referencing/reference_list.pdf)*

A **reference** list only includes books, articles etc that are cited in the text. A **bibliography** is a list containing the sources used in developing a publication and other sources the author considers might be of use or interest to the reader. The reference list is arranged alphabetically by author. Where an item has no author it is cited by its title, and ordered in the reference list or bibliography alphabetically by the first significant word of the title.

**Page numbers should only be included in in-text citations when directly quoting from another source.**

## What is a Reference/Citation?

A reference or citation consists of the elements that allow the reader to trace the original book or article you have read or cited from. When citing a book you need the following elements, in this order:

Author. Year of publication. *Book title*. City of publication: Name of the publisher.

For example, if you looked at a **book** with these elements:

Author: Mack, Charles  
Year of publication: 2005  
Title: *Looking at the Renaissance: essays toward a conceptual appreciation*  
Publisher: Taylor & Francis  
Place of Publication: London

Your citation would look like this:

Mack, C. 2005. *Looking at the Renaissance: essays toward a conceptual appreciation*. London: Taylor & Francis.

For a **journal article**, you need the following elements:

Author(s). Year of publication. Title of article. *Title of journal* volume number (issue number): Page numbers.

Authors of article: Labonte, R. Schrecker, T.  
Year of publication: 2007  
Title of article: Globalisation and social determinants of health  
Title of Journal: *Globalisation and Health*  
Volume: 3  
Issue: 7  
Pages: 190-200

Your citation would look like this:

Labonte, R., and T. Schrecker. 2007. Globalisation and social determinants of health. *Globalisation and Health* 3(7): 190-220.

For information on citing electronic journals, see the examples in the list below.
